YASH PATEL

+918433033825 | Yash.Patel@lloydsbanking.com | Linkedin | Github | Portfolio

PROFESSIONAL SUMMARY

Apprentice Engineer with practical exposure to cloud data engineering and infrastructure-as-code within a regulated enterprise environment. Familiar with Google Cloud Platform services including Dataflow, BigQuery, Cloud Composer, Cloud Storage, IAM, KMS and service accounts, alongside Apache Airflow, dbt, Terraform, Harness CI/CD and Docker. Contributed to code reviews and technical analysis across GDW raw, staging, curation and dbt microservices, with focused work on Kerberos-based SQL Server authentication. Comfortable learning complex platforms, documenting deployment flows and collaborating with engineering teams.

PROFESSIONAL EXPERIENCE

Apprentice Engineer | Lloyds Technology Centre **Nov 2025 – Present**

Hyderabad

- Built foundational knowledge of GCP-based data platforms, including Cloud Composer/Airflow orchestration, Dataflow job execution, BigQuery tables, Cloud Storage, project configuration, service accounts, IAM roles and KMS encryption.
- Reviewed code and configuration across GDW, raw, staging, curation and dbt microservices to understand data ingestion, transformation, orchestration and deployment patterns.
- Investigated Kerberos authentication used by Python/Apache Beam services to establish secure SQL Server connections, including keytab handling, service principals, runtime dependencies and worker-environment considerations.
- Compared the existing Kerberos implementation across raw, staging, curation and dbt services with the GDW implementation, helping identify reusable authentication and connection patterns.
- Executed and analysed Dataflow jobs from local scripts and learned how DAGs in Cloud Composer trigger and monitor cloud data-processing workflows.
- Worked with Terraform configuration to understand and support provisioning of GCP resources such as projects, APIs, service accounts, IAM bindings, KMS keys, storage resources and BigQuery datasets/tables.
- Learned dbt concepts including model organisation, source-to-staging-to-curation transformations, dependency management, testing and execution within the wider GDW platform.

Java Intern | Webs Optimization Software Solution **Aug 2025 – Sep 2025**

Ahmedabad, Gujarat

- Developed backend services using Java, Spring Boot, and MySQL.
- Built and enhanced RESTful APIs and microservices following modular and scalable architecture principles.
- Worked with Spring Boot, dependency injection, configuration management, and database integration.
- Participated in backend feature development, debugging, testing, and code reviews.
- Gained exposure to Docker containerisation, application deployment workflows, and basic Kubernetes concepts.
- Strengthened understanding of backend engineering concepts including API design, database optimisation, exception handling, and application security.

Web Development Intern | Fulgent Technologies Private Limited **Jun 2023 – Jul 2023**

Noida, Uttar Pradesh

- Implemented WebSocket-based real-time communication and gained exposure to industry development practices.
- Collaborated with cross-functional team members, strengthening technical communication, teamwork and delivery discipline.

TECHNICAL SKILLS

Cloud & Data	Google Cloud Platform, Dataflow, BigQuery, Cloud Composer, Cloud Storage, IAM, Service Accounts, KMS, Artifact Registry, Cloud Build, Pub/Sub
Data Engineering	Apache Beam (Python), Apache Airflow, DAGs, dbt, data ingestion, raw/staging/curation layers, SQL connectivity
DevOps & IaC	Terraform, Terraform Cloud concepts, Harness CI/CD, Docker, Git, GitHub, pull requests, code review, pre-commit checks
Security	Kerberos authentication, keytab concepts, service principals, service-account impersonation, least-privilege IAM
Programming	Python, Java, JavaScript, SQL

Web & Databases	Node.js, Express, React, MongoDB, MySQL, WebSocket, REST APIs, Stripe
Tools	Postman, Thunder Client, Material UI, Bootstrap

SELECTED PROJECTS

Microservices-Based E-Commerce Platform | Personal Project **GitHub**

Technologies: Java, Spring Boot, JSP**,** Spring Security, JWT, MySQL, Docker, Microservices, API Gateway, Kubernetes

- Designed and developed a microservices-based application consisting of Authentication Service, Product Service and API Gateway, enabling modular and scalable backend architecture.
- Implemented JWT-based authentication and authorization using Spring Security to secure APIs and manage user access across distributed services.
- Containerised all services using Docker and Docker Compose, integrating MySQL databases, service networking, health checks and API Gateway routing for streamlined deployment.

Personal Finance Management System | Group Project **GitHub | Live**

Technologies: Mern Stack

- Developed a personal finance management application to track income, expenses, and savings goals, providing insights into spending habits and financial health.
- Key features include expense tracking, budget management, savings goal tracking, transaction analysis, and financial health assessment.

SaaS Subscription Platform with Stripe | Personal Project **GitHub | Live**

Technologies: Mern Stack, Stripe

- Developed a full-stack SaaS application with subscription plans and Stripe payment integration for secure online transactions.
- Integrated Stripe APIs for payment collection, subscription management and webhook handling to automate billing workflows.
- Designed and developed a Super Admin Dashboard for monitoring organisational plans, subscriptions and user activities.

Real-Time Chat Application | Personal Project **GitHub | Live**

Technologies: Mern Stack, WebSocket

- Developed a real-time chat application enabling efficient and responsive communication between users.
- Implemented WebSocket technology for seamless instant messaging and low-latency communication.
- Designed and integrated secure user authentication and messaging functionalities to ensure reliable and safe interactions.

VidyaSaathi School Portal | Group Project **GitHub**

Technologies: Node.js, Express.js, MongoDB, React Native

- Contributed to the development of a multi-school portal designed to support educational institutions across a state.
- Designed analytics features for student dropout analysis based on school, location, gender, caste and education level.
- Developed solutions addressing school dropout challenges, supporting data-driven decision-making aligned with Right to Education initiatives.

EDUCATION

B.Tech in Computer Science | GLA University, Mathura **Jun 2025**

77.9%

Intermediate | Shriji Baba Saraswati Vidya Mandir **May 2021**

78.3%

High School | Shriji Baba Saraswati Vidya Mandir **May 2019**

84.0%

LEADERSHIP & ACHIEVEMENTS

- New India Vibrant Hackathon 2023, Regional Round: Backend Developer and Team Leader; led the GLA University team on a higher-education dropout problem statement. Cert
- Smart India Hackathon 2023, Internal Round: Backend Developer and Team Leader; achieved a top-30 position among 189 teams for a school dropout analysis solution. Cert
